INSTALLING A CLOTHESLINE

Congratulations! Thank you for reducing your carbon footprint in order to save our Planet

1. Choose two adjacent points that will provide enough space to hang your clothes. Try to pick a spot that is relatively flat and open.
2. Tools Needed – A hammer, Pencil, Drill, Wire cutters, Punch.

3. Depending on how you would like the clothesline, choose either a comfortable position to hang your clothes or the highest point you can reach.
4. Mark with a pencil where you would like the pulley installed.
5. Mark using a punch or nail then Drill a 1/4" x 2 inch holes.
6. Screw in holding hook until secure.

Use these pictures as a guide.

7. When mounting the opposing pulley make sure it is approximately two feet higher than the top of the elevator. This will reduce the amount of sag.
8. Complete steps 4 and 5 with the opposing pulley.
9. Screw in holding hook until secure. You can use just the hook with your Solar Drying Pulley or attach it to a Solar Dryer Turnbuckle which will allow you to tighten the line when it starts to sag. (Sag will occur naturally as the line stretches with the extra weight of the clothes).

10. Attach a piece of single strand wire through the lower eye hole to secure on the post below the pulley. This will prevent it from twisting. Complete this for both pulleys.

Use these pictures as a guide

11. Connect the clothesline wire with a Solardrying Yellow Joiner, Mini Winch, or Joiner Tightener.

12. The Solardrying Divider will hold the 2 lines together allowing the upper line to help support the weight on the lower line. The Solardrying Divider is placed on the clothesline after ½ the wash is hung. (More than one divider may be necessary depending on the length of the line or the weight of the clothes).

13. Insert clothes pin into locking hole to stop the line from moving once clothes are hanging.

Enjoy Your Solar Drying!!!!!!

Tips:

Hanging your clothes neatly will increase the speed of drying and reduce wrinkles.

Once clothesline is loaded elevator should be locked in the top position.

Use a damp cloth to clean clothesline (every time you use it).

Caution is required to use a ladder to install.

The Wright Aluminum Clothesline is intended for outdoor use only.

Use your clothesline for clothes drying purposes only.
